the
National Capital Region
Fire & Emergency Response
Analysts Symposium

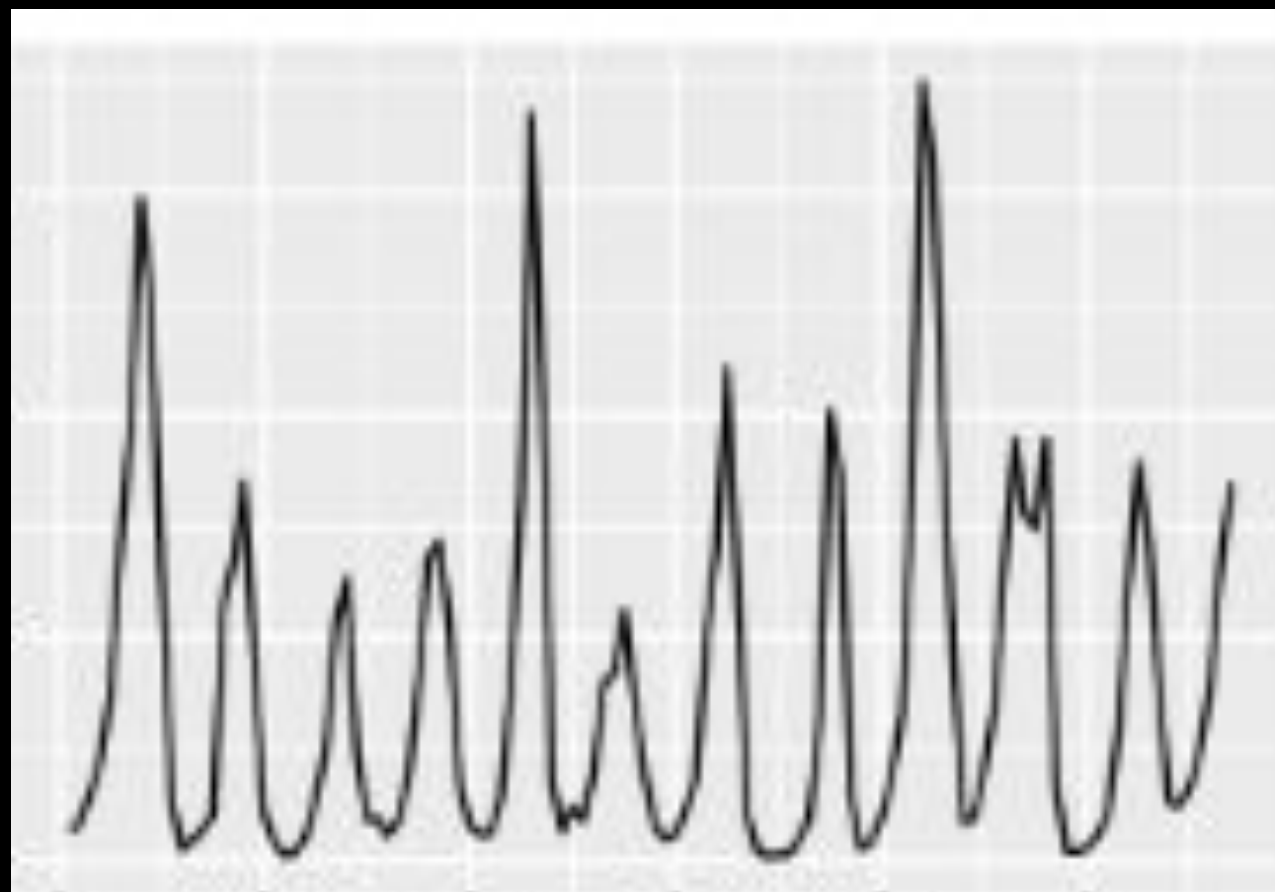

what a grand idea...who could have predicted it?

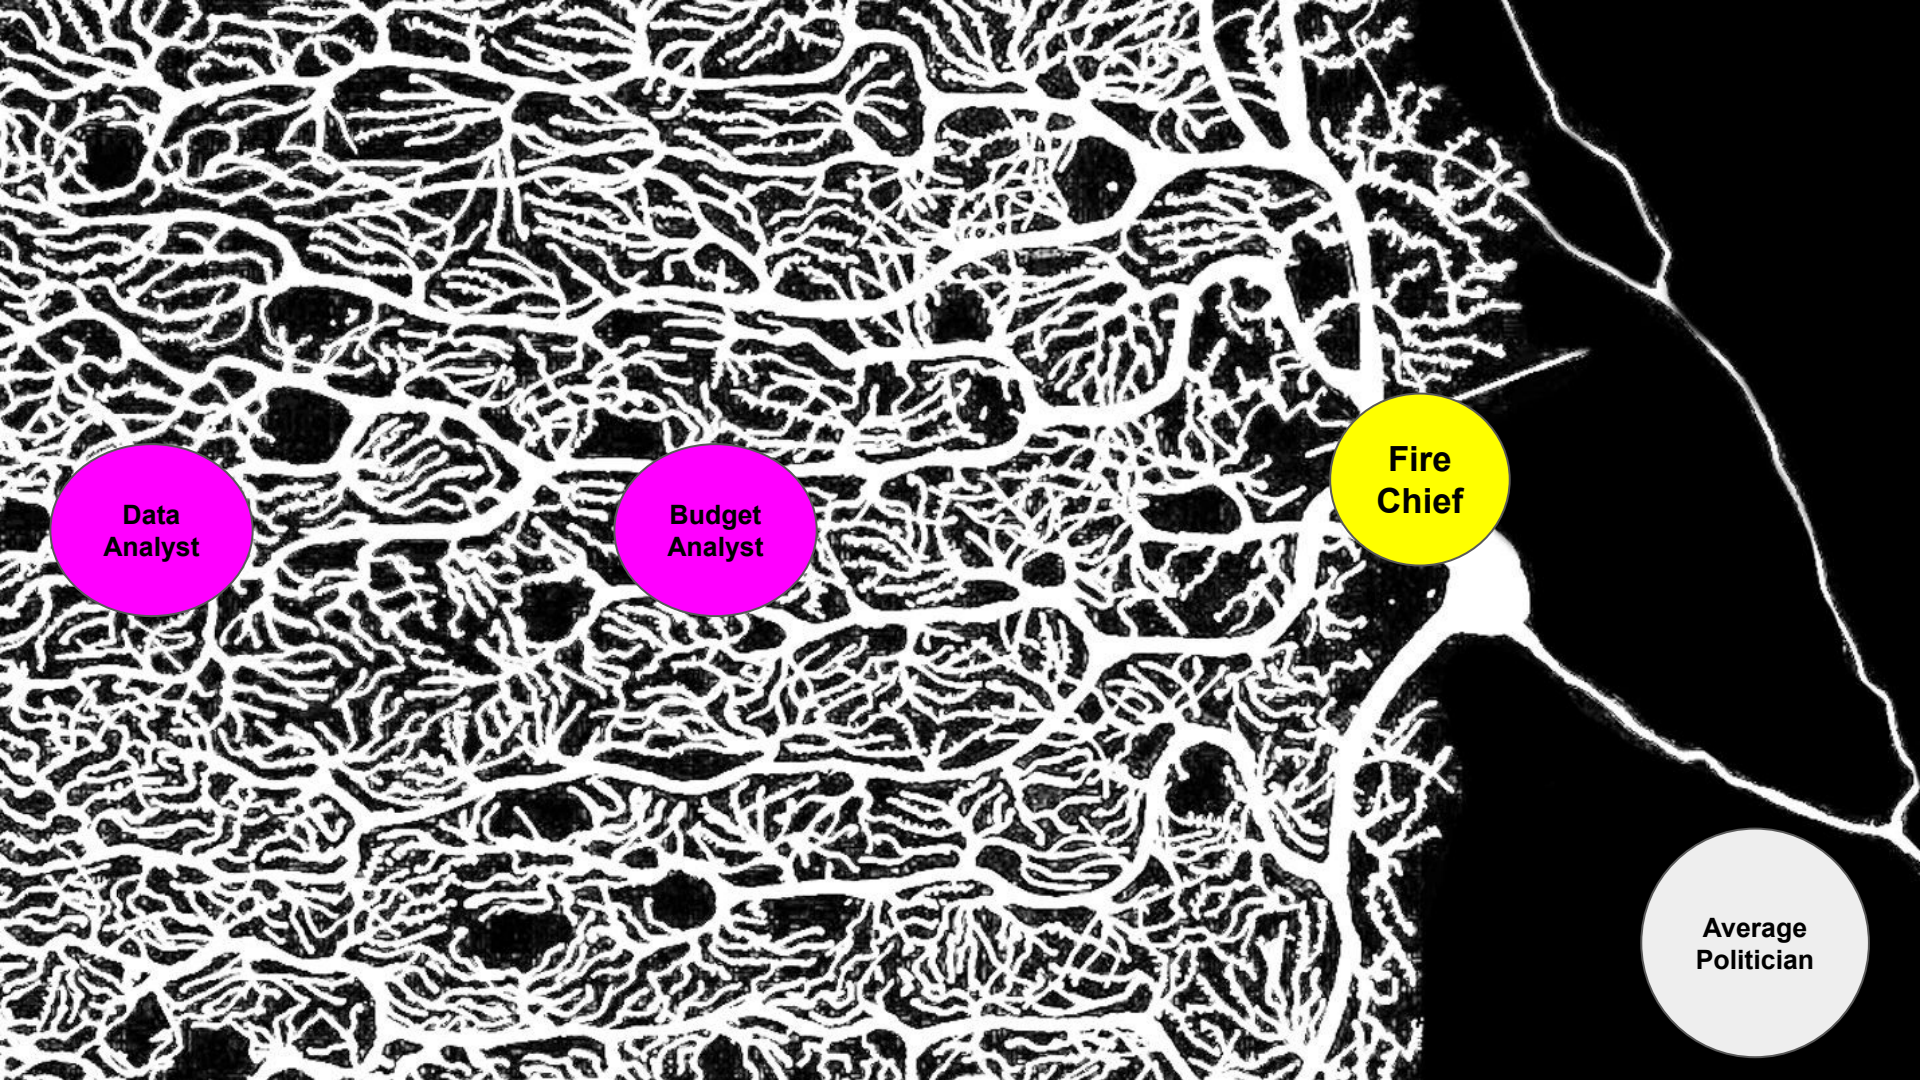

**If you don't get the question right,
your answer doesn't matter.**

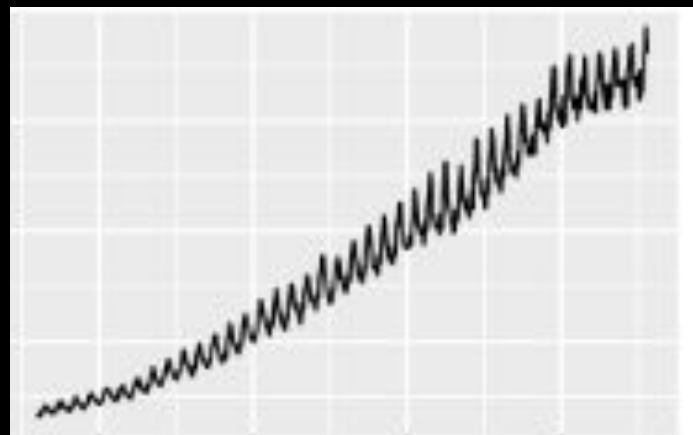

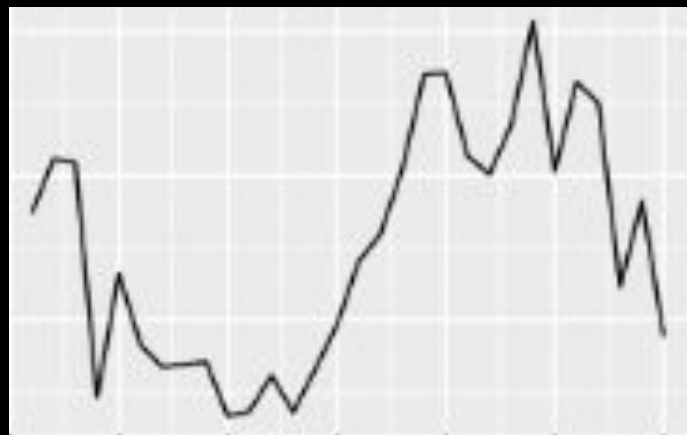

~william lind

...it depends...

The pacing challenge. “How do we configure our thinking and subsequently our resources in ways that allow us to learn faster and be more adaptable in the face of a constantly changing environment?”

Questions that I wish the analyst would ask.

- What are you trying to do?
- Do you have a hypothesis?
- What do you assume to be true?
- How do you think about the problem?
- Are you having similar problems elsewhere?

**the mission is NOT to convey
everything you know.**

**the mission is to convey what
needs to be heard.**

~charles bailey
